

VSMOKE Management Tool Link

Hello everyone,

Here is the correct link:

http://199.128.173.141/vsmoke/vsmoke_setup.exe

The user guide can be downloaded from: http://199.128.173.141/vsmoke/Brief_Instructions_031510.pdf

The alternative place to find the installation instructions and download both the software and brief user's guide is at: <http://199.128.173.141/vsmoke/download.htm>

Again, would you please do me a big favor and forward this to your email distribution list so it will get the widest possible distribution in the eastern United States?

The R8 Air Team has worked diligently on the latest version of the user interface for VSMOKE. We have also provided a means to translate the FEPS results to use with HYSPLIT Ready and PC HYSPLIT. We believe the HYSPLIT Ready (web version) can be used, but with caution until the prescribed fire community has done enough testing with actual burns to verify the predictions are reasonable. Next month we plan to complete our tests of PC HYSPLIT and we are hopeful to be able to recommend this dispersion model as a tool.

Have a good day!
